Publications

The publications are organized into four major themes related to different aspects of my research work: detector development, design and construction, nuclear and intermediate energy physics (mostly done during my Ph.D. work), heavy flavor physics data analysis, new experiment initiatives and study groups on the future of the area of particle physics that I am interested in. Within each group, the publications are listed in chronological order. I have annotated some of the publications that represent the major highlights of my scholarly work during the last four years.

Publications related to electronics and detector development

These papers document my work in novel detector technologies and electronics for elementary particle physics experiments. This is an area of research that I have pursued throughout my career and where I have established my leadership with two major projects, the CLEO Ring Imaging Cherenkov detector, now operational, and the BTeV RICH, now in its research and development stage. I have played an active role in the research described in all the papers listed below, I have actually written many of them. I will annotate a few of the most recent ones, written since my last promotion.

Published Papers in High Energy Physics

These papers are mostly related to physics analysis results that are the outcome of the CLEO experiments. The author list includes all the experimenters that are active part of the collaboration. The collaborating institution order is chosen at random and within each institution the author list is alphabetical. This is indicative of the fact that these papers are the outcome not only of the individual effort of the group that performed the analysis reported, but also of the collective effort to build the apparatus that is used in the measurements and to insure that the data are of good quality. I will annotate the papers written after my last promotion that discuss results of physics analysis topics that I pursued with my students or postdoctoral research associates or that review my critical perspective on key topics in heavy flavor phenomenology.
